

THERMA-KLEEN®

TECH SHEET

Detail Brushes

Depending on your cleaning needs, you may require one or more types of detail brushes, it is important to factor in the type and size of the detail brush that you will need for the specific task you wish to perform.

Therma-Kleen® offer four different types and sizes of detail brushes. Some of the use for each of these is described below.

STAINLESS STEEL DETAIL BRUSH:

1" Dia.

2-1/2" Dia.

Use – Stainless-steel is hard and should only be used on surfaces that are scratch resistant. This brush is the most durable and wears the longest. Always test in a small inconspicuous area before proceeding. Stainless-steel is ideal for applications requiring a durable and abrasive brush. It can be used on surfaces such as masonry, certain tiles such as Quarry tile and high-quality stainless-steel, removing grease and carbon build-up from restaurant and food service grills, BBQ grills, etc. Stainless-steel

brush can be used to remove some painted areas, if the surface will undergo a sanding process prior to repainting. If in doubt test in an inconspicuous area first. The stainless-steel brush can also leave a black mark on some surfaces, which is difficult to remove on certain types of tile.

BRASS DETAIL BRUSH:

1" Dia.

2-1/2" Dia.

Use – The Brass brush can be used on many metal surfaces as well as on some Tiles, Ovens, Etc. Always test in an inconspicuous area before use. Brass is softer than stainless-steel and consequently will wear faster. Brass is ideal for applications requiring more abrasive action than nylon detail brushes, but it is softer than stainless-steel. Brass detail brushes are also popular for grout cleaning as well as other vapor steam cleaner applications, especially cleaning stubborn substances off many metal surfaces,

removing grease and carbon build-up on BBQ grills to mention a few. This brush works well on oxidized aluminum surfaces; however, it will have a polishing effect and make the surface look brighter than areas which have not been cleaned with this tool.

NYLON DETAIL BRUSH

1" Dia.

2-1/2" Dia.

Use – Nylon is the usual go-to brush for most applications. Nylon is ideal for applications requiring less abrasiveness than either stainless-steel or brass detail brushes and is very popular for most applications including grout cleaning as well as virtually unlimited other surfaces applicable where there is a possibility of scratching the surface, such as Bath Tubs, Door Jambs, Grout, Glass Shower Doors, Etc. It is the most used brush when a surface needs to be Pre-steamed to soften prior to cleaning. It is often used to pre-

steam decals for removal. When in doubt about which brush to use, try the Nylon bristle brush first. This brush can generally be used on almost any surface except on flat latex wall paint and non-water proof ceiling tiles.

HORSE HAIR DETAIL BRUSH:

1" Dia.

2-1/2" Dia.

Use - Most commonly used on material which are delicate and have fine details. Our Natural Horse Hair is inherently soft, durable and nonabrasive. Packed with thousands of genuine horse hairs which tend to wrap around a surface making it possible to penetrate deeper than other brush materials. They are perfect for delicate materials such as Leather, Vinyl, Cloth, Porcelain, Scratch Sensitive Plastic, Jewelry & Automotive Detaining. It works well by gently cleaning all Interior surfaces, air vents, convertible tops, etc. They are generally considered

safe on all surfaces, but it is best to test on an inconspicuous area before beginning. Dry Vapor units with Horse Hair brushes, using the proper protocol, have even been used to clean computer circuit boards.

NOTE:

Logic will dictate the type of bristle to use. Is the item to be cleaned Hard, Soft, Scratch Resistant, Textured, Painted, Fabric, Delicate, Etc. Once the type of bristle has been determined, the size of the brush can be determined by the size of the project or the compactness of the area to be cleaned.

Therma-Kleen® has the expertise to provide you with the proper equipment for your application.
