

THERMA-KLEEN®

TECH SHEET

Wide Brush

The Therma-Kleen® 12" Wide Brush is used to clean larger areas. The Wide Brush is faster than a mop and certainly does a more effective job. The Wide Brush is generally used more for daily or weekly cleaning & sanitization rather than restoration.

MATERIALS – Fabrics, Metals, Ceramic, Stone, Porcelain, Vinyl, Leather, Plastic, Wooden Floors, Waxed Floors – Carpet (200

degrees or less for Nylon carpets), Upholstered Chairs, Draperies, Etc. or any other surface that extreme heat does not harm the surface which you intend to clean.

USE – the size of the area more than the type of surface dictates the use of the Wide Brush.

CLOTH – Use of a Cloth: The Floor Brush can be used with or without a cloth/bonnet. All Therma-Kleen® systems are provided with a microfiber bonnet for easy attachment and cleaning. If a cloth is to be used, there are clips on the brush to attach the cloth.

NO CLOTH - When used without a cloth, on a hard surface, the surface will need to be wiped with a clean, dry cloth or mop immediately after passing over the surface. When cleaning a rough textured surface, it is more desirable to clean without a cloth over the brush.

FABRIC SURFACE – a Cloth/Bonnet may or may not be necessary when cleaning fabrics. **SANITIZING:** a cloth is not necessary when the desired goal is to just sanitize the surface. **CLEANING:** To remove stains, place a microfiber or terry cloth directly on the stain, Gradually and gently move the brush/cloth to absorb the stain into the clean areas of the cloth, until the stain is gone.

VAPOR VOLUME – adjust the volume to low or about 1/4 . Occasionally more volume will be required, however volume should always be less than 1/2. If the volume is turned too high the surface will become oversaturated, requiring more time to dry. It is the heat that loosens the dirt from the fabric, not the moisture.
