

THERMA-KLEEN

TECH SHEET

Health & Exercise Industry

In the service industry, to attract and keep good customers the facility must provide the highest standards in cleanliness and comfort. In this regard the Super-Heated Dry Vapor Steam produced by Therma-Kleen Systems can be a game changer. Regular use of the machine will provide an exceptional level of cleanliness, which will be well appreciated by the customer.

Therma-Kleen produces Industrial Grade systems which are constructed of Heavy Gage Stainless-Steel, a Stainless-Steel Boiler, Incoloy Heater and our fittings are Stainless-Steel or

Brass, not plastic like most others.

Our Industrial Grade machines produce super-heated steam (5% moisture content) with temperatures up to 380° F with pressures up to 160 psi. It is this heat that kills pathogens, as well as ticks & lice, almost on contact.

Customer appreciation of your facility is all about the comfort level. By cleaning & sanitizing the workout equipment with a Therma-Kleen machine, the customer will become comfortable knowing they will not be exposed to infectious entities. Additionally, the Locker Room is a natural breeding ground for Mold & Mildew, the odors they cause, as well as an ideal environment for pathogens to hide and spread. The various standard attachments that come with Therma-Kleen machines will allow for proper killing of the unwanted entities.

The use of our Therma-Kleen system will eliminate the use of harsh toxic chemicals found in cleaning agents, and will keep your equipment looking like new. Our system will flush out dirt and debris from hard to reach places & porous surfaces, eliminate customer exposure to toxic and allergenic causing fumes and residue, restore tile & grout to original colors, all the while sanitizing all surfaces, thereby protecting the customer.
