### Triangular Brush

The Triangle Brush is the most versatile of all cleaning attachments. It can be used on almost any dry surface type including (but not limited to), Fabric, Metals, Ceramic, Stone, Porcelain, Vinyl, Leather Plastics, Etc.

Generally, use of the triangle brush is dictated by the size of the object or surface being cleaned, rather than a specific surface type. The Triangle Brush is used when the surface is too large to be cleaned with the Detail Tool or too small to be cleaned by the Wide Brush. The Triangle Brush can also be used on large areas that are too dirty for the Wide Brush to work effectively.

**Use of a Cloth:** The Triangle Brush can be used with or without a cloth/bonnet. If a cloth is to be used, there are clips on the brush to attach the cloth. When used without a cloth on a hard surface, the surface will need to be wiped with a clean dry cloth immediately after passing over the surface with the Triangle Brush.

**Rough Textured Surfaces:** It is more desirable to clean without a cloth or mitten over the brush.

**Fabrics:** A cloth/bonnet is or is not necessary when cleaning fabrics. Placing a cloth over the brush is not necessary when the desired goal is to sanitize the fabric more than to clean it.

To remove certain carpet stains, place a terry or microfiber cloth on the stain and gently apply the brush to the stain. The stain will incrementally be driven into the cloth. Gradually move the cloth to absorb the stain into the clean areas of the cloth, until the stain is gone.

Most of the time, better results will be achieved by placing a terry or microfiber cloth over the Triangle Brush. This is done by placing the cloth on a smooth surface and neatly folding the cloth over the brush. Push down on the clips (located on top of the brush) and tuck the cloth underneath. Release the clips and the cloth will be securely fastened to the brush. When covered with an absorbent cloth, cleaning becomes a one-step process. Simply wipe the surface slowly and all dirt and debris will be driven into the cloth, hard surfaces will usually dry in less than a minute.
